

What can I do?

A branded site is a way for the administrator to customize the learning platform to be more representative of their company. This can help your learners feel more "at home" when they're logged into your LMS, and it's a great reflection on your organization! As an administrator, you will be able to modify and choose a custom logo, brand color, login background, and custom image on your home page. This is a chance for you to have a little fun with your program!

Specifications

To create your branded site, you will need to gather your high quality company logo, brand color, and a background image of your choosing. Please follow the guidelines below when compiling these materials.

FILE	FORMAT	DIMENSIONS	SUGGESTION
Logo	.png, .jpg, .gif	558x275px (or larger equivalent aspect ratio)	Crop out white space around logo.
Brand Color	HEX color code, standard color palette.		
Login page background	.png, .jpg, .gif	1920x1080px	Use these dimensions to avoid the graphic being cut off
Custom Home Page Image	.png, .jpg, .gif	1920x240px	240 pixels tall will give you a nice height and scale well, but the system is designed to respond to whatever height you feel looks best for your site!

Examples

Browser Scaling and Responsiveness

Some parts of your login background image will be hidden depending on the size of the browser window. Below are a few examples. The red and white box represents the username and password entry area. The dark parts are what generally gets hidden at their particular aspect ratios.

IMAGE WIDGET STANDARDS

For customizing your homepage, administrators should use these suggested standards for the best results. It is suggested that you use a high-quality image on any area on the homepage. Lower quality images have a better chance of looking distorted if they are stretched.

File Types: PNG or JPEG

Header, Main & Footer: 1920x240, 1280x160. Minimum of 1000px wide for best quality. (16:9 ratio expands to large)

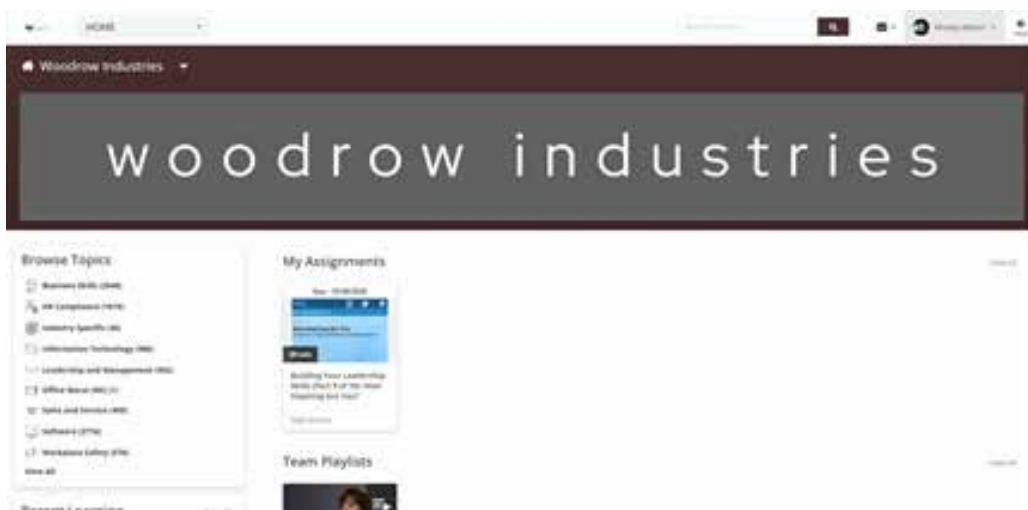

Sidebar: Upload an image with a 1:1 ratio for best outcome. 1920x1080, 1920x240 works well. Minimum 300x300png, 1080x1080png.

BizLibrary uses the following sizes as a thumbnail on a marketing site. 16:9 ratio - 700x394 or 1920x1080 will work.
