

Curriculum Builder enables administrators to search and explore content within the administration area of the platform while providing more advanced options to easily find content, and build curricula.

Administrators can specify search criteria to quickly narrow down the results of content and see exactly what the learner will see during their experience, including support materials and optional boosters, if applicable. Once you've curated the curriculum to your liking, administrators can easily export content packages and import into their LMS.

BENEFITS OF USING CURRICULUM BUILDER

CURATE

Simply curate content into learning paths and import into your LMS

SORT

Quickly narrow down content specific to the learning objectives at hand

PREVIEW

Preview video lessons without affecting your personal learning transcript

CUSTOMIZE

Customize your view of the results based on your needs

SEARCH

Search active and archived content

REPORT

Download report of browsing results

COMMON USE CASES

Management has identified a correlation between new managers and employee turnover. You've been tasked to create learning path for new managers that speaks to the top soft skills needed to succeed in their new role. Using Curriculum Builder, you narrow down content to several areas such as communication, handling difficult situations, and stay interviews, export your content items, and upload to your LMS.

New HR laws regarding HIPAA have changed again and you need all employees to get updated on the latest changes. You jump into Curriculum Builder and narrow content down to the HIPAA sub-topic area. You select the highest rated, 5-part series, view your draft, and export. Import into your LMS and create an assignment for employees due at the end of the month.
