

# BizLibrary Content Integration for Cornerstone OnDemand

Save yourself time and frustration while presenting your learners with the most up to date and fresh titles from BizLibrary.

Using the BizLibrary Content Integration through Cornerstone ensures all new and updated course titles from your BizLibrary content library are automatically added to your Cornerstone LMS as they are released.

- Subject
- Course Title
- Course Description
- Course Image
- Course Image Thumbnails
- Course Duration
- Keywords
- Language

To activate this integration, you will need to speak with your CSOD representative. Once this integration has been added to your account, BizLibrary will provide the necessary credentials for CSOD to complete the configuration of the integration.

## Frequently Asked Questions

Reach out to our [customer support](#) team.

### How do I get started?

Speak with your CSOD representative to get started! It is important to note that this content integration is not listed in the Edge Marketplace, however, is still available to be used by BizLibrary clients using the CSOD LMS. Your CSOD representative will need to involve their technical integrations team to get the process started.

### What does it cost?

The content connector is a CSOD product/functionality and not controlled by BizLibrary. Please speak with your CSOD representative to receive a quote.

### What tasks will I still need to perform?

**Content updates happen every 24 hours between BizLibrary and CSOD.**

When new titles are added to your portal, you will be ready to publish them to your employees in bulk or by selecting specific titles. This action is recommended on a monthly basis.

As monthly retirements are announced, you have 90 days to remove them before they are inactivated. It will be up to you when you choose to archive retired courses, we recommend that you check these on a monthly basis.

### How are content retirements reflected while using the content connector?

By default, inactive content is not visible to Catalog Admins. However, the catalog admins can change settings and still view the inactive content in their portal.

Inactive content cannot be assigned to new users. If there are already any users who have that inactive training on their transcript, the launch button will be disabled and they will not be able to launch the content anymore.
