

Oracle Systems Integration

Clients utilizing Oracle are now able to integrate with BizLibrary content to upload new content, update modified content, and manage retired content automatically. The integration also allows clients to track completions of BizLibrary content in Oracle.

Steps

1. To enable this feature, you need to log a service request (SR) with Oracle because it's only available through the Controlled Availability Program at this time. If approved to join the program, you're required to participate in testing and to provide feedback.

Configure External Providers

Provider	Description	Status	Actions
Akamai	Validates Akamai configuration	Enabled	<button>Validate</button>
Adobe Connect	Enables Adobe Connect hosted virtual classrooms.	Not Enabled	<button>Configure</button>
WebEx	Enables integration with WebEx for virtual classroom capabilities.	Not Enabled	<button>Configure</button>
LinkedIn Learning	Enables importing of LinkedIn Learning courses into the learning catalog.	Not Enabled	<button>Configure</button>
Skillsoft	Enables importing of Skillsoft courses into the learning catalog.	Not Enabled	<button>Configure</button>
BizLibrary	Enables importing of BizLibrary courses into the learning catalog.	Enabled	<button>Configure</button>
Intuition	Enables importing of Intuition courses into the learning catalog.	Enabled	<button>Configure</button>

2. Once approved, submit request to support@bizlibrary.com to obtain your Billing ID and API Key.
3. In Oracle, configure BizLibrary as an external provider using the [My Client Groups > Learning > Configure External Providers](#) task.

Configure External Provider: BizLibrary

Save and Close
Cancel

This account hasn't been verified. Click the button to validate.

FAQs

How do I get started?

Log a service request (SR) with Oracle

What does it cost?

The integration is free of charge to Oracle customers.

What tasks will I still need to perform?

Oracle recommends scheduling the sync to happen daily.

When new titles are added to your catalog, they will automatically appear in the staging area. As an Oracle admin, you have the ability to decide whether content additions/updates automatically sync to your catalog or remain in staging until you manually add them.

As monthly retirements are announced from BizLibrary, you have 90 days to remove them before they are no longer accessible to a learner. It will be up to you when you choose to remove retired courses, we recommend that you check these on a monthly basis.

How are content retirements reflected while using the content integration?

Content items are end dated and courses that are associated with these items are end dated. Once content has been retired, the content cannot be assigned, because that item cannot be found, and the course cannot be found by a Learner performing searches. If active enrollments that are being worked on by a Learner include retired content, the learner will be presented with a message that the content is no longer accessible.
